SKILLS

MongoDB | Express | ReactJS | NodeJS | NestJS | Redux | Advanced Data structures and Algorithm
Python | JAVA | AWS | Git and Github | Linux | Docker | Jenkins | kubernetes | Terraform | Ansible
Prometheus | GoLang | Typescript | NextJS | JWT | Figma

PROFESSIONAL EXPERIENCE

Front-End Developer :

Oct 2020 – Aug 2022

Freelancing

- Developed a web application to enhance the visibility and accessibility of **ACME Cleanroom Services**, providing an intuitive platform for clients to better understand the company's offerings.
- Developed a front-end application to improve the user experience and operational efficiency of **ROY MakeUp studio**, providing a user-friendly platform for clients and enabling enhanced workflow

FullStack Developer:

Feb 2021 – Nov 2022

As a freelance developer, I have been providing MERN stack projects to final-year students for their academic curriculum, assisting in their technical and practical learning experiences.

PROJECTS

MovieBook, This is a MERN stack app 🔗

- Log in or sign up using an Email ID and Password, Enjoy the flexibility to log out as needed, Delete your own playlists with ease.
- The app provides the following services: **Create a Playlist, Check Public Playlists, Search for Movies, & Delete from Your Playlist**
- check the live project here 🔗

Finmo, Full Stack Banking 🔗

- The app was built based on the **API provided by Finmo**.
- Anyone with an **Accesskey and secret key** can use the app by logging in.
- The project uses **NestJS** in the backend and **React** in the front.
- The app includes features for **GET, POST, and DELETE** operations.
- The app can be used in real-world scenarios by simply changing the endpoints to the production API.

Asana and Airtable Webhook Integration, An integration service that connects your Asana tasks with Airtable. 🔗

- A service designed to seamlessly integrate your Asana tasks with Airtable, eliminating the need for manual copying. This service streamlines the synchronization of task data between the two platforms.
- Built on the Node.js framework, this integration orchestrates a seamless connection between Asana and Airtable.
- The core function revolves around automatic data transfer: whenever a new task is generated in Asana, it is copied to Airtable.

Free-Hit, Sponsored OPEN-SOURCE project 🔗

- Free-Hit is an application that is used to search for **Free tools** that are both **free and helpful** for our needs
- Free-Hit has **200+ stars, 280+ pull requests, and 170+ contributors**
- Free-Hit has been **selected for GSSOC23** as a project for new contributors to contribute to.
- Recently, **Free-Hit has secured sponsorship** for further enhancement, thanks to its uniqueness and helpfulness.
- Free-Hit can be used by anyone. From professional IT people to normal users, everyone will benefit
- It's the best place to find free tools that can help us speed up your process and make the process easier.

EDUCATION

Bachelor's in Computer Applications [Data Science],

Mysuru, India

JSS Science and Technology University

OTHERS

LeetCode 🔗

- Achieved the prestigious 100 Days Badge 2022 by consistently solving over **275+ problems** with a daily streak of 150 or more days, demonstrating exceptional problem-solving skills, and earning recognition where only 3% of participants attain this distinction.
